

# With younger patients receiving heart valves, DURABILITY IS NOW A CRITICAL ISSUE

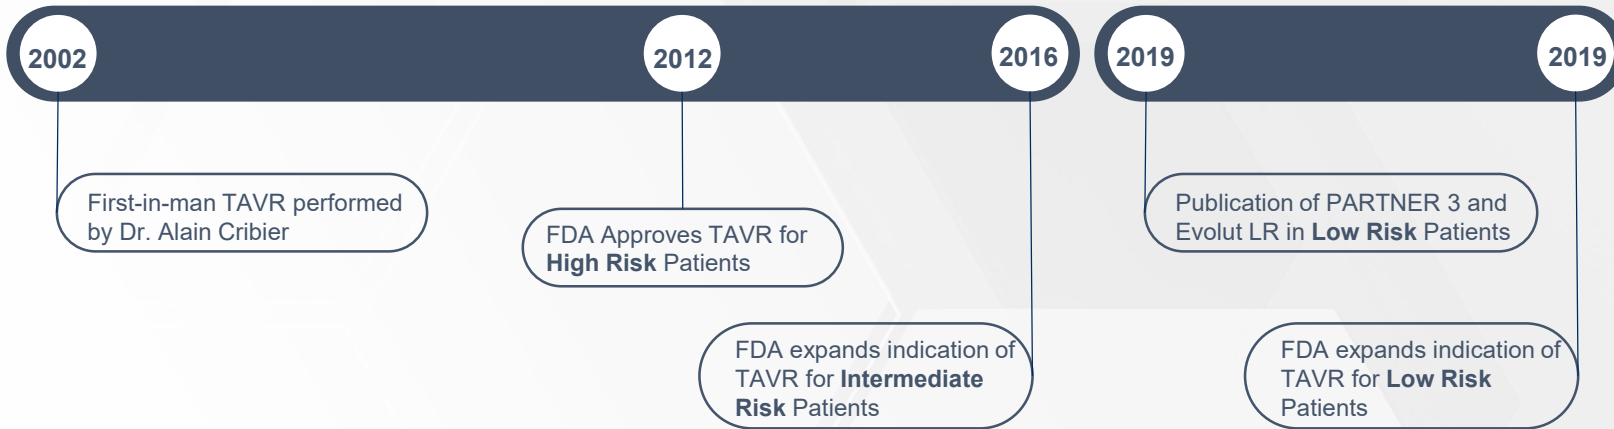

With TAVR now being the treatment of choice for Aortic Stenosis Patients, coupled with existing Transcatheter Heart Valves failing as early as 5-8years after implantation, then

**NOW IS THE RIGHT TIME** for a more Durable Solution.....

## Initial Experience and Progressive Adoption

## Rapid Expansion

## Unmet Need

With younger and lower risk patient populations receiving TAVR – Transcatheter Heart Valves MUST be more durable
